

Paint Options Standard & RAL Colors

Standard Colors Shown on our Edgeglow Sconce

Peachtree offers four standard colors for cylinders and decorative products. All colors are durable interior/exterior powder coat. **Matte White**, **Matte Black**, **Bronze** (slightly textured semi-gloss finish) and **Natural** (semi-gloss finish).

RAL Color Options

Our "build to order" process easily allows for non-standard paint colors on your fixtures.

RAL is a system developed for defining colors for paint and coatings. It has become the most popular worldwide color standard used today.

You supply us with a valid RAL number and we make it happen. There is a one time setup charge per color and a minimal charge for powder coating each fixture. Option pricing is on the website.

With 2328 RAL colors in total (213 Classic, 490 Effect and 1625 Design colors) the Architect or Designer has the ability to match the color on any material they want. Once the color is chosen, Peachtree, at the request of the customer, can supply a paint chip of that color painted here at our factory.

RAL color selectors are readily available online to help determine the color you need.
